Detect, prevent and cure all periodontitis through clinical microscopy

The International Institute of Periodontology has set itself the goal of supporting practitioners in the implementation of the Bonner Method, a modern medical approach aimed long-term regulation of periodontitis cases.

The techniques and tools for periodontal monitoring, developed by **Dr. Mark Bonner**, allow a systematic cure by restoring a healthy microbial flora, compared to traditional methods that often only delay the disease or stabilize it without curing it. The results are exceptional: focused on the disappearance of oral parasites, the treatment of the infection brings the elimination of bad breath, the ending of gum's bleeding and 95% of periodontal crevice healing.

4 days seminar. Theoretical and practical training for practitioners and their staff, covering the following topics:

- Normal and pathological Biofilm
- Periodontal disinfection tools
- Clinical and microbiological data
- Protocol and the path towards periodontal healing
- Transmission of periodontal disease
- Being in action to cure patients in your office

Mark Bonner, doctor in dentistry, has devoted his entire life to the fight against periodontal disease. Author of several scientific publications, books and a private practice of more than 30 years, he has trained over 1,000 practitioners.

PROGRAM

1st step : 3 consecutive days

Theory, practice and application

Description

A focus on the treatment of periodontal infection and inflammation using the phase-contrast microscope. Dr. Bonner will provide the technological means to restore health. The third day will end with a free afternoon of reflection and discussion.

Examples of themes: biofilm according to periodontal status, effective medical and pharmaceutical treatment, Parodex index, clinical comparison, usefulness of microscopy, practical work, etc.

Full details: <http://perioheal.com/training/>

4th day (1 to 6 month later)

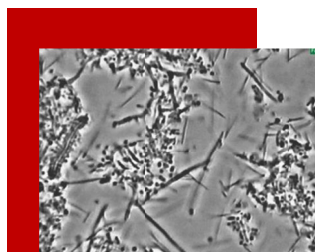

Integration day

Integrate the method and move towards health

For this day of exchange, we will help you improve communication with the patients about periodontal disease, how and when to announce the disease and accompany them to the end of treatment. We will summarize the treatment, the protocol and we will get back to the integration of the various supports received in previous courses.

Tools

A CD-ROM will be given to you with new tools such as the periodontal treatment plan to give to the patient as well as the estimate to accompany it, data sheets on periodontal disease and a list of standard phrases that can help in the explanation of the patient treatment (what to say and what not to say).

Total cost of training for English session in Montreal is \$4,600 USD, tax included (one dentist and 3 staff members).
Possibility of payment for 3 consecutive months. Send your registration form with minimum deposit of 900 USD. Not refundable. Second doctor, same clinic, \$3,600 USD.
